

# Earth's Changes Due To Slow Process

## Notes & Study Guide

1.

Slow Processes:

breaking down of rocks into smaller pieces

What are some causes of weathering?

- 
- 
- 

2.

the movement of weathered rock

What are some causes of erosion?

- 
- 
- 

3.

where the weathered rock is dropped off.

What are some causes of deposition?

- 
- 
-

## Fast Processes:

1.

When this occurs the lava hardens making the mountain larger.

---

2.

Rock, sand and soil on a slope or cliff slide down to a lower location. Water soaking the land is usually the cause

---

3.

When a lot of water from rivers and streams overflow on to land, Heavy rainfall is the main cause.

---

4.

Earth's surface shakes and rolls causing damage to the crust by leaving cracks and openings

---

\*\*\*\*Please use WS on Rapid Process to identify each event with the before and after picture.
