

ROCK SONGS

Sing to tune of "Row Your Boat"

Many different rocks
Have different properties
Hardness
Texture
Color
Luster
Are some properties.

SEDIMENTARY rock
Has been formed in layers
Often found near water sources
With fossils from decayers.

Then there's IGNEOUS rock
Here since Earth was born.
Molten lava, cooled and hardened
That's how it is formed.

These two types of rocks
Can also be transformed
With pressure, heat, and chemicals
METAMORPHIC they become.

Many different rocks
Have different properties
Hardness
Texture
Color
Luster
Are some properties.
